ACTIVITIES AND ACCOMPLISHMENT
OF THE JOINT COMMITTEE ON
ATOMIC ENERGY IN THE 89TH
CONGRESS, 1ST SESSION, 1966

A. D. ...

On January 20, 1966, the Committee received an intelligence briefing on recent developments affecting the field of atomic energy from Admiral William P. Raborn, Director of the Central Intelligence Agency. Throughout the year other informal briefings by the CIA were given to the Joint Committee. These meetings were a continuation of the regular practice of the Committee's briefings by the CIA on matters dealing with the atomic energy programs of other nations of interest to the United States.

Safeguard No. 4 is Test Detection and Monitoring of Foreign Nuclear Programs. The Joint Committee has in its periodic briefings from the CIA continued to follow closely the progress of foreign nuclear programs and our ability to satisfactorily monitor them. In connection with test detection capabilities, Joint Committee interests are indicated in part VC. of this report.

Remarks by Mr. Holifield.
